Nextmote Workshop Keynote Speaker: Pat Pannuto	xiv
Madcom Workshop Keynote Speaker: Stefan Mangold	xv

Papers

Session 1: Dependability

Session Chair: Olga Saukh

Adaptive Transmission Scheduling for Energy-Aware Real-Time Wireless Communication	1
Arda Gumusalan, Robert Simon, Hakan Aydin	
Predictable MAC-level Performance in Low-power Wireless under Interference	13
Mathieu Michel, Thiemo Voigt, Luca Mottola, Nicolas Tsiftes, Bruno Quoitin	
Thingtegrity: A Scalable Trusted Computing Architecture for the Internet of Things	23
Tobias Rauter, Andrea Höller, Johannes Iber, Christian Kreiner	

Session 2: Short papers

Session Chair: Luca Mottola

Simulating Intermittently Powered Embedded Networks	35
Muhammad Hamad Alizai, Qasim Raza, Yasra Chandio, Affan A. Syed, Tariq M. Jadoon	
Simultaneous Acoustic Localization of Multiple Smartphones with Euclidean Distance Matrices	41
Seyed-Mohsen Moosavi-Dezfooli, Yvonne-Anne Pignolet, Dacfe Dzong	
PKF-ST: A Communication Cost Reduction Scheme Using Spatial and Temporal Correlation for Wireless Sensor Networks	47
Yanqiu Huang, Wanli Yu, Alberto Garcia-Ortiz	
Implementation of an Energy Management Control Strategy for WSNs using the LINC Middleware	53
Maria Isabel Vergara-Gallego, Olesia Mokrenko, Maxime Louvel, Suzanne Lesecq, Francois Pacull	
TRAIL: Topology Authentication in RPL	59
Heiner Perrey, Martin Landsmann, Osman Ugus, Matthias Wählisch, Thomas C. Schmidt	

Session 3: Smart buildings

Session Chair: Christian Renner

iLTC: Achieving Individual Comfort in Shared Spaces	65
Chayan Sarkar, Akshay Uttama Nambi S.N., R. Venkatesha Prasad	
LightMon: Apportioning the Effect of Light Switching Events on the Electricity Consumption of Buildings	77
Frank Englert, Patrick Lieser, Marius Rettberg-Päprow, Alaa Alhamoud, Doreen Böhnstedt, Ralf Steinmetz	

Session 4: Networking

Session Chair: Carlo Boano

WEAVE: Efficient Geographical Routing in Large-Scale Networks	89
Michał Król, Eryk Schiller, Franck Rousseau, Andrzej Duda	

Efficient and Balanced Routing in Energy-Constrained Wireless Sensor Networks for Data Collection.....	101
Miguel Navarro, Yao Liang	
Sharing a Medium Between Concurrent Protocols Without Overhead Using the Capture Effect	113
Michael König, Roger Wattenhofer	
Source-Node Selection to Increase the Reliability of Sensor Networks for Building Automat.....	125
Atis Elsts	

Session 5: State and Time

Session Chair: Philipp Sommer

Efficient State Retention for Transiently-powered Embedded Sensing	137
Naveed Anwar Bhatti, Luca Mottola	
Time-of-Flight Aware Time Synchronization for Wireless Embedded Systems.....	149
Roman Lim, Balz Maag, Lothar Thiele	

Session 6: Sensing

Session Chair: Philipp Sommer

Mitigating Slow Dynamics of Low-Cost Chemical Sensors for Mobile Air Quality Monitoring Sensor Networks	159
Adrian Arfire, Ali Marjovi, Alcherio Martinoli	
Pre-Deployment Testing, Augmentation and Calibration of Cross-Sensitive Sensors	169
Balz Maag, Olga Saukh, David Hasenfratz, Lothar Thiele	

Session 7: Tracking and Localization

Session Chair: Marcel Baunach

Applied Sensor-Assisted Monte Carlo Localization for Mobile Wireless Sensor Networks.....	181
Salke Hartung, Arne Bochém, Andreas Zdziszek, Dieter Hogrefe	
Information Bang for the Energy Buck: Towards Energy- and Mobility-Aware Tracking	193
Philipp Sommer, Jiajun Liu, Kun Zhao, Branislav Kusy, Raja Jurdak, Adam McKeown, David Westcott	
NaviGlass: Indoor Localisation Using Smart Glasses	205
Yongtuo Zhang, Wen Hu, Weitao Xu, Hongkai Wen, Chun Tung Chou	

Posters And Demos

Session Chairs: Luca Mottola and Olaf Landsiedel

Poster: Towards an Ultra-wide Band Sensor Network for Aircraft Applications	217
D. Neuhold, J.F. Schmidt, U. Schilcher, G. Brandner, C. Bettstetter, J. Klaue, D. Schupke	
Demo: Topological Robustness of RPL with TRAIL	219
Martin Landsmann, Peter Kietzmann, Thomas C. Schmidt, Matthias Wählisch	
Poster: Approximation: A New Paradigm also for Wireless Sensing.....	221
Thiemo Voigt, Magnus Sjölander, Frederik Hermans, Alexandra Jimborean, Erik Hagersten, Per Gunningberg, Stefanos Kaxiras	
Poster: Maxima Estimation in Spatial Fields by Distributed Local Polynomial Regression.....	223
Reiner Jedermann, Henning Paul, Walter Lang	
Demo: SecureFlex – A Flexible System for Security Management.....	225
Christina Leitner, Thomas Schnabel, Helmut Neuschmied	
Demo: Dead Reckoning for Monte Carlo Localization in Low Seed Density Scenarios.....	227
Arne Bochém, Andreas Zdziszek, Salke Hartung, Dieter Hogrefe	
Demo: Design and Evaluation of Underground Wireless Sensor Networks for Reforestation Monitoring.....	229
Martin Gellhaar, Jens Dede, Hartmut Koehler, Anna Förster	

Poster: Integrating Rich User Interfaces with Real Systems	231
Laurent-Frederic Ducreux, Maxime Louvel, François Pacull, Maria Isabel Vergara-Gallego	
Demo: Ball and Plate Wireless Control	233
Maxime Louvel, François Pacull, Maria Isabel Vergara-Gallego	
Poster: Affordable Acoustic Modem for Small-Sized Autonomous Underwater Vehicles	235
Christian Renner, Alexander J. Golkowski, Erik Maehle	
Demo: TWIN Node, A Flexible Wireless Sensor Network Testbed	237
Idrees Zaman, Jens Dede, Anna Förster	
Demo: Deploying a Drone to Restore Connectivity in a WSN	239
Thuy T. Truong, Kenneth N. Brown, Cormac J. Sreenan	
Demo: A High-Performance, Energy-Efficient Node for a Wide Range of WSN Applications	241
Federico Terraneo, Alberto Leva, William Fornaciari	
Poster: Programming Support for Time-sensitive Software Adaptation in Cyberphysical Systems	243
Mikhail Afanasov, Luca Mottola, Carlo Ghezzi	
Demo: Terra – Scripting Customized Components for Wireless Sensor Networks	245
Adriano Branco, Noemi Rodriguez, Silvana Rossetto	
Demo: Wearable Sensor System for Human Biomechanics Monitoring	247
Atis Hermanis, Ricards Cacurs, Krisjanis Nesenbergs, Modris Greitans, Emil Syundyukov, Leo Selavo	
Demo: Towards a MAC Protocol App Store	249
Jan Bauwens, Bart Jooris, Eli De Poorter, Peter Ruckebusch, Ingrid Moerman	
Poster: System Architecture for Programmable Connected Devices	251
Maria Laura Stefanizzi, Luca Mottola, Luca Mainetti, Luigi Patrono	
Poster: Towards a Secure, Resilient, and Distributed Infrastructure for Hydropower Plant Unit Control	253
Andrea Höller, Johannes Iber, Tobias Rauter, Christian Kreiner	
Poster: Dronemap - A Cloud-based Architecture for the Internet-of-Drones	255
Basis Qureshi, Anis Koubaa, Mohamed-Foued Sriti, Yasir Javed, Maram Alajlan	
Poster: ContikiMAC, some critical issues with the CC2420 Radio	257
Marie Paule Uwase, Maite Bezunartea, Jacques Tiberghien, Jean-Michel Dricot, Kris Steenhaut	
Demo: 'Funkdebugger' - A Failure Analysis Framework for Industrial Wireless Communication Systems	259
Ulf Wetzker	
Poster: Building a Stairway to Centralised WSN Control	261
Pablo Corbalán, Victor Cionca, Ramona Marfievici, Donna O'Shea, Dirk Pesch	
Poster: Single Packet Link Estimation	263
Camilo Rojas, Damien Piguet, Jean-Dominique Decotignie	
Poster: Efficient Power Control Based on Interference Range in Wireless Ad Hoc Networks	265
Junmei Yao, Wei Lou, Chao Yang	
Poster: 3D Virtual Disaster Management Environment using Wireless Sensor Networks	267
Anis Zarrad, Anis Koubaa, Omar Cheikhrouhou	
Demo: IoT Meets Robotics - First Steps, RIOT Car, and Perspectives	269
Hauke Petersen, Cedric Adjih, Oliver Hahm, Emmanuel Baccelli	
Demo: Fine-tuned Lighting Control Leveraging Smartphone-based Occupancy Detection	271
Alexander de Moes, Jens Joachim K. Pedersen, Chayan Sarkar, R. Venkatesha Prasad	

Poster: Distance Estimation Modelling in High Performance Localization System (HPLS)	273
Michał Marks, Andrzej Sikora, Ewa Niewiadomska-Szynkiewicz	
Poster: SoEasy - A Software Framework for Easy Peripheral Control Programming in Diverse Hardware Platforms.....	275
Kwang-il Park, Jong-ha Shin, Jin-hae Lee, Seong-eun Yoo	
Demo: Eavesdropping on PolyPoint –Scaling High-Precision UWB Indoor Localization	277
Benjamin Kempke, Pat Pannuto, Bradford Campbell, Joshua Adkins, Prabal Dutta	
Demo: Event Localization using Instagram	279
Prasanna Giridhar, Tarek Abdelzaher	
Poster: Detection of Wormhole Attack on Wireless Sensor Networks in Duty-Cycling Operation.....	281
Takashi Minohara, Kyosuke Nishiyama	
Poster: RI-MAC Enhancements for Interference Resilience	283
Alex King, Utz Roedig	

Dependability Competition

Session Chair: Carlo Alberto Boano

Competition: Channel Exploration/Exploitation Based on a Thompson Sampling Approach in a Radio Cognitive Environment	285
Arash Maskooki, Viktor Toldov, Laurent Clavier, Valeria Loscr�, Nathalie Mitton	
Competition: Towards Low-Latency, Low-Power Wireless Networking under Interference	287
Beshr Al Nahas, Olaf Landsiedel	
Competition: RedFixHop.....	289
Jirka Klaue, Angel Corona, Martin Kubisch, Javier Garcia-Jimenez, Antonio Escobar	
Competition: An Adaptive Protocol Stack for High-Dependability based on the Population Protocols Paradigm	291
Dimitrios Amaxilatis, Ioannis Chatzigiannakis	
Competition: Is Concurrent Transmission Flooding a Good Idea for Random Traffic?	293
Makoto Suzuki, Chun-Hao Liao, Yuki Katsumata, Kyoichi Jinno, Hiroyuki Morikawa	
Competition: Sparkle — Energy Efficient, Reliable, Ultra-low Latency Communication in Wireless Control Networks.....	295
Dingwen Yuan, Matthias Hollick	
Competition: Reliability through Timeslotted Channel Hopping and Flooding-based Routing	297
Pedro Henrique Gomes, Thomas Watteyne, Pradipta Gosh, Bhaskar Krishnamachari	
Competition: Interference-Aware Multi-Channel Cross Layer Protocol for Energy-Efficient and Low-Delay Networking	299
Guillermo Sierra Aiello, Ilker Demirkol, Anna Calveras, Carles Gomez, Eduard Garcia, August Betzler	
Competition: ContikiMAC with Differentiating Clear Channel Assessment	301
Alex King, James Hadley, Utz Roedig	
Competition: Dependable Network Flooding using Glossy with Channel-Hopping	303
Philipp Sommer, Yvonne-Anne Pignolet	
Competition: Multimodal Reactive-Routing Protocol to Tolerate Failure	305
Tiong Hoo Lim, Iain Bate, Jon Timmis	

Nextmote Workshop

Session 1: Security and Simulation

Session Chair: Marcel Baunach

CESEL: Securing a Mote for 20 Years.....	307
Kevin Kinningham, Mark Horowitz, Philip Levis, Dan Boneh	
Towards a Secure Key Generation and Storage Framework on Resource-Constrained Sensor Nodes.....	313
Michael Höberl, Ihtesham Haider, Bernhard Rinner	
Using Cooja for WSN Simulations: Some New Uses and Limits.....	319
Kévin Roussel, Ye-Qiong Song, Olivier Zendra	

Session 2: Design for Low Energy and Devices

Session Chair: Marco Zuniga

The Neverending Runtime: Using new Technologies for Ultra-Low Power Applications with an Unlimited Runtime.....	325
Björn Cassens, Arthur Martens, Rüdiger Kapitza	
Cinamin: A Perpetual and Nearly Invisible BLE Beacon.....	331
Bradford Campbell, Joshua Adkins, Prabal Dutta	
OpenMote+: a Range-Agile Multi-Radio Mote.....	333
Pere Tuset-Peiró, Xavier Vilajosana, Thomas Watteyne	

Madcom Workshop

Session 1: Exploiting Visible Light

Chair: Frederik Hermans

OptiSec3D - A new Paradigm in Secure Communication and Authentication featuring Time-of-Flight.....	335
Hannes Plank, Matthias Almer, Robert Lobnik, Christian Steger, Thomas Rupprechter, Holger Bock, Josef Haid, Gerald Holweg, Norbert Druml	
Embedded Visible Light Communication: Link Measurements and Interpretation	341
Milad Heydariaan, Shengrong Yin, Omprakash Gnawali, Daniele Puccinelli, Domenico Giustiniano	
Using Spatial Light Modulators in MIMO Visible Light Communication Receivers to Dynamically Control the Optical Channel.....	347
Jimmy C. Chau, Cristian Morales, Thomas D.C. Little	

Session 2: Rethinking Radio

Chair: Daniele Puccinelli

Enabling Future Consumer Radios to Interact Directly With Things.....	353
Craig Partridge	
Do Multiple Bits per Symbol Increase the Throughput of Ambient Backscatter Communications?	355
Carlos Pérez-Penichet, Ambuj Varshney, Frederik Hermans, Christian Rohner, Thiemo Voigt	
LoRa for the Internet of Things	361
Martin Bor, John Vidler, Utz Roedig	

Message from the General Chair

Kay Römer
TU Graz

Welcome to EWSN 2016, the International Conference on Embedded Wireless Systems and Networks, held during February 15-17 in Graz, Austria. Originally established as the European Conference on Wireless Sensor Networks in 2004, EWSN has been the major European outlet for sensor networks research and a yearly gathering point for the research community. Starting from sensor networks, research has expanded over the years into other related fields such as Internet of Things, where the focus is on providing Internet connectivity to embedded systems, or Cyber-Physical Systems where the focus is on inclusion of networked control aspects. Yet, all these areas share the focus on wirelessly networked embedded systems.

To reflect this broadened field, the acronym EWSN now expands to International Conference on Embedded Wireless Systems and Networks. Also new in 2016, the conference has a featured topic each year to put a focus on a hot topic, but without excluding other topics in scope of the conference. The 2016 featured topic is dependability, reflecting the trend that wirelessly networked embedded systems are increasingly used in safety-critical applications such as smart production systems that require dependable performance. To this end, EWSN 2016 features for the first time a dependability competition where international teams compete in providing the most reliable networking solution in environments with strong interference. To open EWSN also to new emerging topics, two workshops have been added to the program that explore novel wireless communication paradigms such as visible light communication and to shed light on how the next generation of wireless embedded computing platforms will look like.

Besides these changes at the naming and content levels, EWSN 2016 is also held for the first time in cooperation with ACM SIGBED. The proceedings are published electronically in the ACM Digital Library, following an open access model where the papers are available online and free of charge to everybody in order to maximize the impact of the research results published at EWSN.

Implementing all these changes in order to continue the success of EWSN also during the next decade was a major endeavour that would not have been possible without the fantastic support of the organizing team, first and foremost the program chairs Koen Langendoen and Thiemo Voigt, the workshop chairs Leo Selavo and Marco Zuniga, the competition chair Carlo Boano, as well as the poster and demo chairs Olaf Landsiedel and Luca Mottola. They brought many innovative aspects and an exciting program to EWSN 2016 as they will report on the following pages. My deepest thanks go also to the publication chair Christian Renner and Meghan Haley from Junction Publishing who were instrumental to implement the new publication model of EWSN. Christian Steger, Markus Quaritsch, Engelbert

Meissl, Silvia Reiter, and Nora Zakany made EWSN happen by managing the finances, web site, and local arrangements with highest dedication. I am also grateful to the sponsors of EWSN 2016, Graz University of Technology, University of Luebeck, NXP Semiconductors, the City of Graz, and the Federal State of Styria.

I hope you enjoy the conference in its new format!

Message from the Program Chairs

Chalmers University of Technology

DEPENDABILITY COMPETITION CHAIR

Carlo Alberto Boano
TU Graz

WORKSHOP CHAIRS

Marco Zuniga
TU Delft

Leo Selavo
University of Latvia

To ensure the highest possible standard for the renewed EWSN conference, a number of important changes have been incorporated in the submission, review, and selection process for the papers that make up the program of the 2016 conference. First, by adopting the two-column ACM format, authors were provided with more space to present their contributions in a greater level of detail. Second, the composition of the program committee included quite a number of new faces representing expertise from adjacent and novel research fields that fit the broader scope of the conference. Third, the review process was overhauled to include a rebuttal phase, in which authors were given the opportunity to address incorrect factual statements in the reviews and provide additional information to clear away uncertainties and concerns raised by the reviewers. Many authors took this opportunity and their input was used in the first-ever live TPC meeting held on November 25th at Schiphol airport, Amsterdam, The Netherlands. The TPC meeting was attended in person by 13 members, and several others called in from home to aid the selection process. The final outcome was a total of 16 full papers and 5 short papers. Half of these selected papers were assigned a shepherd to ensure that the quality of the final version would be raised to the required level and that essential critics on the submitted version were appropriately addressed. We would like to thank both the authors and the shepherds to go the extra mile and make the renewed EWSN conference program a success.

In addition to the presentations, there are two thrilling keynotes to kick off each of the main conference days. The first keynote is given by Chenyang Lu from Washington University in St. Louis. His talk is about dependability in industrial wireless control through cyber-physical co-design. The second keynote is held by Friedemann Mattern from ETH Zürich. He covers the ongoing rise of smart objects and how humans can cooperate with them.

POSTERS / DEMOS

Complementing the oral presentations of regular papers, we have an exciting poster and demo session at EWSN with a total of 34 contributions, including 18 posters and 16 demos. Each poster and demo submission was peer-reviewed by at least 2 reviewers to ensure quality and scope. We would like to thank all TPC members of the poster and demo track for their work and for their suggestions to the authors on how to improve the abstracts. During the conference, poster and demo authors join a “one-minute madness” session to showcase their work to the entire audience. For the first time at EWSN, a “best poster/demo teaser award” is granted based on public vote.

DEPENDABILITY COMPETITION

This year’s dependability competition is an exciting premiere for EWSN that has attracted authors from 13 different countries. During the conference, 11 international teams composed of 40 authors strive to provide the most reliable and efficient networking solution in environments rich with radio interference. The idea is to bring practitioners from academia and industry together and stems from the increasing need for communication protocols that can meet the stringent dependability requirements imposed by new application domains, such as smart production, smart cities, or connected cars. Organizing the dependability competition for the first time was a major effort that would not have been possible without the exceptional support of a number of people. We would like to explicitly thank Markus Schuß, Engelbert Meissl, and Oliver Bock for their invaluable help in setting up the required infrastructure and in taking care of the local arrangements. Good luck to all contestants and happy coding!

WORKSHOPS

This year, there are two workshops in conjunction with EWSN.

MadCOM 2016 is the First International Workshop on New Wireless Communication Paradigms for the Internet of Things. We identified the need to provide a forum to discuss the new and exciting methods currently being investigated to communicate data wirelessly. We received submissions from Europe, the US and Africa; with each submission receiving at least three reviews from the TPC members. After a thorough discussion, the TPC agreed to accept 6 papers to assemble a stimulating program that brings together many different methods under one roof. The final program gives attendees the opportunity to learn and deliberate about the strengths and opportunities of areas ranging from visible light communication and ambient backscatter to novel ways to exploit active radio-frequency communication. The workshop program includes an insightful keynote by Stefan Mangold about the use of visible light communication for toys and the Internet of Things. We would like to express our gratitude to the TPC for their commitment and support.

The NextMote workshop represents “Next Generation Platforms for the Cyber-Physical Internet”. It is dedicated to novel hardware, associated software paradigms, and challenges for the world of IoT and remote distributed sensing. The keynote presentation by Pat Pannuto traverses the evolution from yesterday’s motes to “next” and “next-next” generation motes by touching upon the achievements and visions of the Embedded Systems Research Lab at the University of Michigan, thus setting up the tone of the workshop. The TPC has accepted 6 papers for presentation from Europe and the United States of America. Topics include dependable security for networked embedded systems with limited resources, minimizing the power consumption through energy harvesting, and new platforms that are prepared to meet the requirements of tomorrow in terms of functionality and size at the scale of few millimeters. We thank the International TPC for dedicating time and effort to this workshop to become reality. We look forward to a fruitful and interesting meeting.

We hope you enjoy all facets of the program of EWSN 2016 and appreciate the quality of the contributions presented in this conference and its workshops.

Keynote Address

Dependable Wireless Control through Cyber-Physical Co-Design

Chenyang Lu
Washington University, USA

ABSTRACT

Industrial wireless control systems are the new frontier of cyber-physical systems. While the adoption of industrial wireless standards has demonstrated the promise of wireless sensor-actuator networks in industrial environments, there remain daunting challenges in developing control systems that are dependable over wireless networks due to communication delays, data losses and resource constraints in such networks. In contrast to traditional approaches of designing wireless and control subsystems in isolation, we need a cyber-physical co-design approach that co-joins wireless and control designs to overcome the limitations of wireless communication. This talk will present recent advances toward dependable wireless control systems: (1) real-time wireless sensor-actuator networks with delay guarantees; (2) control-aware wireless network design; (3) realistic case studies of industrial control systems through holistic wireless cyber-physical simulations. The talk will further highlight research challenges and opportunities in the exciting area of industrial wireless sensor-actuator networks.

SPEAKER BIO

Chenyang Lu is the Fullgraf Professor in the Department of Computer Science and Engineering at Washington University in St. Louis. His research interests include real-time systems, wireless sensor networks, cyber-physical systems and Internet of Things. He is Editor-in-Chief of ACM Transactions on *Sensor Networks*, Area Editor of IEEE *Internet of Things* Journal, and Associate Editor of the new ACM Transactions on *Cyber-Physical Systems and the Real-Time Systems* Journal. He also chaired premier conferences such as IEEE Real-Time Systems Symposium (RTSS), ACM/IEEE International Conference on Cyber-Physical Systems (ICCPs) and ACM Conference on Embedded Networked Sensor Systems (SenSys). He is the author and co-author of over 150 research papers with over 14,000 citations and an h-index of 53. He received the Ph.D. degree from University of Virginia in 2001, the M.S. degree from Chinese Academy of Sciences in 1997, and the B.S. degree from University of Science and Technology of China in 1995. He is a Fellow of IEEE.

Keynote Address

Cooperating with smart objects: Humans in the loop!

Friedemann Mattern
ETH Zurich, Switzerland

ABSTRACT

We embed ever smaller processors in physical objects, network them with other smart things, analyze their sensed data somewhere in a cloud, and optimize real-world processes based on the knowledge gained. The application areas and business scenarios that benefit from Internet of Things technologies are abundant: Wind farms increase their yield, logistic chains are improved, and traffic patterns in whole cities become transparent – to mention only three somewhat arbitrary examples. Many of those classical scenarios are characterized by the fact that they work almost fully automatic - humans are out of the loop. So far, so good.

But with further technical progress and cost reduction, also more and more consumer products and everyday items in our direct personal environments will become smart (“hello Barbie, can you hear me?”) and connected to the Internet and its ecosystem. People will communicate - first with their devices, and later also with many of their more mundane belongings. But when people are in the loop, things get interesting and often complicated. Already the problem how and by what technical means we can communicate with our friendly personal objects is an issue - but when these objects do become really smart, communication is only a means to a higher purpose: cooperation. This gives rise to a number of interesting questions: How, in fact, do we cooperate with smart objects? Do they understand what we want? Do we always understand them? Even scenarios with such seemingly simple smart things as learning thermostats or robot vacuum cleaners are non-trivial in that respect.

There will certainly be much to explore in a future world where people are not out of the loop, but in the loop of communicating smart objects. And that future may be closer than we think.

SPEAKER BIO

Friedemann Mattern is a Professor of Computer Science at ETH Zurich, Switzerland. He was the founding director of the Institute for Pervasive Computing and heads the distributed systems and ubiquitous computing research group. Before being appointed by ETH Zurich in 1999, Mattern was Professor at Saarland University in Saarbrücken and at TU Darmstadt, Germany. He received his PhD from the University of Kaiserslautern, Germany, in 1989.

Mattern has written about 200 research articles and published several books. His main research fields are distributed algorithms, ubiquitous computing, and the Internet of Things, but he is also interested in the far-reaching implications of the increasing digitalization of everyday life. He is an editorial board member of a number of research journals and book series, and he also acts as a scientific and strategic advisor to several research councils. Furthermore, he has initiated and chaired a number of international conferences and is involved in various research projects, often in cooperation with industrial partners. Mattern is a member of the German National Academy of Sciences, of acatech (the German Academy of Science and Engineering), and of the Academia Europaea.

NextMote Workshop Keynote Address

From 2010 to 2030: The Recent Past and Distant Future of Embedded Systems

Pat Pannuto
University of Michigan, USA

ABSTRACT

This talk will traverse the evolution from yesterday's motes to "next" and "next-next" generation motes. Along the way we'll face a few harsh realities that will limit and shape future evolution (a trillion devices cannot demand replacing a trillion batteries), uncover recent results already pushing boundaries (including highlights from the design and implementation of the world's smallest computer), and explore some of the possibilities that emerge when we rethink designs from the ground up (can we build useful motes that don't include CPUs?). The talk is based on recent achievements and visions of the Embedded Systems Research Lab at University of Michigan.

SPEAKER BIO

The keynote talk will be given by Pat Pannuto who is working with Professors Prabal Dutta and David Blaauw at University of Michigan. Pat is the Principal Systems Architect of the Michigan Micro Mote project and most recently designed MBus, a new chip-to-chip interconnect for millimeter-scale systems.

MadCom Workshop Keynote Address

Visible Light Communication for Toys and the Internet-of-Things

Stefan Mangold

Disney Research, Zürich, Switzerland

ABSTRACT

Visible Light Communication (VLC) with Light Emitting Diodes (LEDs) as transmitters and receivers enables low bitrate wireless adhoc networking, which is an interesting new approach for toys and related applications in the entertainment industry. LED-to-LED VLC adhoc networks with VLC devices communicating with each other over free-space optical links typically achieve a throughput of a few kilobit per second at distances of no more than ten meters. LED-to-LED VLC adhoc networks are useful for combining light bulbs and illumination with low-complex networking. In this talk, we present recent research achievements at Disney Research, address open challenges, and demonstrate the performance of our software-based VLC physical layer and a VLC medium access control layer that retain the simplicity of the LED-to-LED approach.

SPEAKER BIO

Stefan Mangold is senior research scientist at Disney Research in Zurich, Switzerland. As an Imagineer of The Walt Disney Company, Stefan has been guiding a small team that contributes to Disney Research's work on wireless communication and mobile computing. Before joining Disney in 2009, Stefan worked at Swisscom, Bern, Switzerland, and Philips Research, USA. His research covers many aspects of wireless communication, for example, protocols and system aspects for wireless LAN, visible light communication, and the Internet-of-Things. Other research interests include smart toys and play patterns, and magical experience designs for the entertainment industry. Stefan teaches a course at ETH Zurich, publishes, and generates IPR in related areas.
